SUMMARY

Software Engineer with 2 years 2 months shipping production web backends and UIs, plus a personal multi-service stack (auth, orders, payments) on Docker/Kubernetes. Strong on clean, tested code, code review, and debugging from logs. Curious about how large services are operated. B.Tech Computer Science.

SKILLS

Fundamentals: data structures, algorithms, REST, concurrency-aware async services, Linux/containers

Languages: Ruby, Python, JavaScript, TypeScript

Platform: Docker, Kubernetes, CI/CD, AWS, Git, Jest tests, Cursor with human review

EXPERIENCE

Software Engineer — SkyAch Software Solutions Pvt. Ltd.

Product engineering for a live trading / exchange system

Jun 2024 – Aug 2026

- Delivered scoped features on a production Rails + React/Next.js stack used by 1,000+ daily users, with code review and mentorship-style pairing.
- Wrote tests where they mattered, fixed production bugs from logs/metrics, and documented API behavior for teammates.
- Shipped through CI/CD and containers; followed up on runtime failures instead of stopping at merge.

PROJECTS

Evented microservices (personal) — Node.js, NATS, Kubernetes

- Split auth, tickets, orders, and payments into services with REST contracts, MongoDB, and Jest tests.
- Used NATS for service events and Kubernetes for local deploy — same “small well-tested pieces of a larger platform” shape as USM/C3 work, without claiming Kafka/Java.

EDUCATION

B.Tech, Computer Science and Engineering (AI specialization)

ITM SLS Baroda University, Vadodara — BS-equivalent CS degree

2020 – 2024
