SUMMARY

Software engineer with 2+ years building reusable web applications: Node.js/Express and React/Next.js on a personal multi-service stack, plus production Rails/React at SkyAch. Writes clean, documented APIs that other people can run. Uses AWS, Docker, Kubernetes, and CI/CD. Identity/IAM is a growth area — production work already includes JWT sessions, protected APIs, and auth services, not a claim of Okta/Auth0 tenure. B.Tech Computer Science.

SKILLS MATCHED TO THIS ROLE

Must-align: Node.js, React.js, Python, REST APIs, JavaScript/TypeScript, Git, data structures

Cloud / delivery: AWS, Docker, Kubernetes, CI/CD, proofs-of-concept, API documentation

Identity-adjacent: JWT auth, session cookies, authorization on APIs (learning Okta/IAM on the job)

EXPERIENCE

Software Engineer — SkyAch Software Solutions Pvt. Ltd.

Custom product engineering — APIs and UIs others had to reuse

Jun 2024 – Aug 2026

- Designed, coded, tested, and shipped Rails + React/Next.js features used by 1,000+ daily users — the same “build an asset someone else can run” loop.
- Documented REST behavior and reviewed teammates’ diffs so delivery was repeatable, not one-off laptop state.
- Operated AWS/Docker/Kubernetes/CI/CD; used Cursor to draft, then hardened before merge.

SELECTED WORK (PERSONAL)

Reusable Node.js + React toolkit — Express, MongoDB, Next.js

- Built Express/TypeScript services (auth, tickets, orders, payments) with JWT sessions and REST so a Next.js client could plug in without sharing databases.
- Wrote Jest tests and Kubernetes deploy notes — closer to a services playbook than a throwaway demo.

EDUCATION

B.Tech, Computer Science and Engineering (AI specialization)

ITM SLS Baroda University, Vadodara

2020 – 2024
