Hiring Team

JumpCloud — Cloud LDAP

Re: LDAP Software Engineer — India (Remote, Bangalore)

Dear JumpCloud Hiring Team,

I am applying for LDAP Software Engineer (India, remote). I do not have OpenLDAP tenure. What I do have is 2+ years of production backend work on auth, user records, and APIs (Rails plus Node.js/Express), plus Docker, Kubernetes, and AWS — the operational half of this posting.

On a personal multi-service platform I isolated identity into its own service and used events so other services did not share writes. I use Cursor the way you describe: generate, test, review, then ship. I want to learn LDAP protocol work (bind/search, DNs, TLS) on this team while contributing on Node/Python services, tests, and on-call from day one.

Sincerely,

**Atul Banyal**
