SUMMARY

Rails backend engineer with 2+ years owning features through production for 1,000+ daily users. Ships APIs, data models, and operational follow-up; reviews others' diffs; uses Cursor with judgment rather than prompt-only. Strong written communication in a remote-style Git workflow. Applying to Senior on GitLab's "varying experience" bar — Intermediate (8736877002) is the tighter level match if you need a conservative hire.

SKILLS MATCHED TO THIS ROLE

Backend: Ruby on Rails, REST APIs, background jobs, modular service boundaries, schema/data modeling

Quality / ops: Automated tests, code review, Docker, Kubernetes, CI/CD, AWS, production debugging

AI: Daily Cursor use; review generated code for correctness, security, and maintainability (not prompt-only)

EXPERIENCE

Software Engineer — SkyAch Software Solutions Pvt. Ltd.

Production Rails backends

Jun 2024 – Aug 2026

- Drove backend features of moderate scope with limited guidance: design APIs, implement, test, ship, then watch them in production.
- Raised the bar in reviews — correctness, auth, and operational risk on money-movement paths, not only happy-path behavior.
- Worked across product and deploy boundaries (Rails APIs, React/Next.js clients, Kubernetes/AWS) rather than a single ticket silo.
- Used AI in the real loop: draft, evaluate, correct; did not skip tests or review.

SELECTED WORK (PERSONAL)

Bounded services for orders/payments — TypeScript, events, Kubernetes

- Split auth, catalog, orders, payments, and expiration so each owned its data; used events instead of a shared dump — a small stand-in for modular-monolith / service-boundary judgment.
- Expiration as a background job; Jest on critical paths; Kubernetes so deploys were repeatable.

EDUCATION

B.Tech, Computer Science and Engineering (AI specialization)

ITM SLS Baroda University, Vadodara

2020 – 2024
