SUMMARY

Software engineer with 2+ years building customer-facing fintech: cryptocurrency-exchange and trading workflows in Ruby on Rails and React/Next.js, used by 1,000+ daily active users. Owns features with a bias for simple, reliable money-movement paths — the same customer-obsession Groww applies to investing products. B.Tech CSE with an AI specialization.

SKILLS MATCHED TO GROWW

Product / domain: Trading systems, wallets/orders, REST APIs, blockchain integrations, payments (Stripe on a personal project)

Stack: Ruby on Rails, React.js, Next.js, JavaScript/TypeScript, Python, SQL

Platform: AWS, Docker, Kubernetes, CI/CD, Git, unit tests

How I work: High ownership, customer-first debugging, keep the UX and the API simple

EXPERIENCE

Software Engineer — SkyAch Software Solutions Pvt. Ltd.

Crypto-exchange / fintech product engineering

Jun 2024 – Aug 2026

- Shipped fullstack investing-adjacent features (place/view orders, balances, trading APIs) on Rails + React/Next.js for 1,000+ daily users who expect money movement to be correct, not clever.
- Integrated blockchain/trading rails and REST contracts so the product stayed simple on the surface while the backend enforced consistent order state.
- Owned deploy and production follow-up on AWS/Kubernetes — if a path failed for a user, I treated it as my bug, not “backend later.”
- Used AI tools to move faster on boilerplate, then rewrote anything that was unclear or unsafe before release.

SELECTED WORK (PERSONAL)

Buy / hold / settle marketplace — orders, payments, expiry

- Built a user-facing marketplace (Next.js) where customers reserve an item, pay, and lose the hold if they don't — the same lifecycle as a simple buy/invest flow: inventory, order, payment, timeout.
- Payments service charges via Stripe and publishes a payment-created event so orders only complete after money clears.

Churn scoring (personal) — Python

- Modeled which customers are likely to leave — useful instinct for a consumer-finance product that lives or dies on retention.

EDUCATION

B.Tech, Computer Science and Engineering (AI specialization)

ITM SLS Baroda University, Vadodara

2020 – 2024
