Hiring Team

Amazon — Global Finance Services / FinOps FP&A

Re: Software Development Engineer I, FinOps FP&A — Bengaluru (Job ID 10432823)

Dear Amazon Hiring Team,

I am applying for Software Development Engineer I, FinOps FP&A (Job ID 10432823) in Bengaluru. For two years I have built payment-adjacent fintech at SkyAch — Rails and React/Next.js APIs for orders, balances, and trading used by 1,000+ daily users. That maps to this team's payments-platform work: correctness, incremental launches, and production follow-through.

I already work the lifecycle in the posting: design multi-tier services, test major features, deploy on AWS with Docker/Kubernetes, and debug live money-movement issues. I use generative AI (Cursor) the way you describe — draft, then evaluate and harden before merge.

A personal payments service (Stripe, events, Kubernetes) is how I practiced settlement-before-complete order state. I can relocate to Bengaluru.

Sincerely,

Atul Banyal
