Hiring Team

GitLab

Re: Intermediate Backend Engineer — Bangalore (Job 8736877002)

Dear GitLab Hiring Team,

I am applying for Intermediate Backend Engineer (Bangalore / remote-first). For two years I have shipped production Ruby on Rails APIs and trading workflows at SkyAch Software Solutions — from clarifying the problem through tests, deploy, and production follow-up for 1,000+ daily users. That matches the ownership loop in the posting: design, implement, test, ship, and operate what I build.

I already work the way GitLab describes AI. Cursor is part of my daily loop, and I treat generated code as untrusted until I review it for correctness, security, and maintainability. I am used to Git-based reviews and written updates in a distributed team.

Separately, I built a personal event-driven backend (auth, catalog, orders, payments, expiration jobs on Kubernetes) to practice bounded services, APIs, and background work. I can relocate to Bengaluru and work asynchronously.

Sincerely,

Atul Banyal
