Hiring Team

GitLab — Database Change Management

Re: Intermediate Backend Engineer — Database Change Management, Bangalore (Job 8722304002)

Dear GitLab Hiring Team,

I am applying for Intermediate Backend Engineer – Database Change Management in Bangalore. My production work is Ruby on Rails on fintech data that cannot be mutated carelessly (orders, balances, trading state). I treat schema and API changes as compatibility problems: older clients and in-flight work still have to succeed after a release.

On a personal multi-service marketplace I isolated each service's data store and used events so inventory, orders, and payments could not diverge after cancel or expire. I added tests before deploy — the same “catch it before customers feel it” habit this team owns for GitLab upgrades.

I work asynchronously, write things down, and want to deepen PostgreSQL migration and upgrade-safety work on this team. I can relocate to Bengaluru.

Sincerely,

Atul Banyal
