Hiring Team

Amazon Payments

Re: Software Development Engineer I, Amazon Payments — Hyderabad (Job ID 10530940)

Dear Amazon Hiring Team,

I am applying for Software Development Engineer I, Amazon Payments (Job ID 10530940) in Hyderabad. For the last two years I have built fullstack software for cryptocurrency-exchange and fintech products at SkyAch — Ruby on Rails, React/Next.js, REST APIs, and blockchain/trading integrations used by more than 1,000 daily active users. That is the same shape of work as payments: correctness, production operations, and careful API contracts.

I am used to the full lifecycle you describe: design, implementation, tests, deploy, and operational follow-through on AWS with Docker and Kubernetes. I already use generative AI (Cursor) the way the posting asks — to move faster, then evaluate and correct the output before it ships.

I also built a personal payments service (Stripe and event-driven orders) to practice distributed design and tests. I would welcome the chance to do that class of work on Amazon's payment platforms.

Sincerely,

Atul Banyal
