SUMMARY

Backend-leaning software engineer with 2+ years shipping production APIs and auth/session paths in Ruby on Rails and Node.js/Express. Operates services on Docker, Kubernetes, and AWS; writes tests before deploy; uses Cursor then reviews output. Not an LDAP specialist — production work is bind-style auth, search/filter of user records, TLS-backed APIs, and keeping identity data consistent across services. Ready to go deep on Cloud LDAP with mentorship on protocol details.

SKILLS MATCHED TO THIS ROLE

Backend: Node.js/Express, Python, Ruby on Rails, REST APIs, JWT/session auth, background jobs

Data / consistency: MongoDB, relational modeling, event-driven updates so user/order state does not diverge

Cloud: AWS, Docker, Kubernetes, CI/CD, Linux, Git, production debugging

Practices: Automated tests (Jest), code review, AI coding assistants with human validation, on-call style follow-up

EXPERIENCE

Software Engineer — SkyAch Software Solutions Pvt. Ltd.

Backend / identity-adjacent fintech APIs

Jun 2024 – Aug 2026

- Designed REST APIs and auth for trading/user data used by 1,000+ daily users — bind, look up, and authorize rather than “just CRUD.”
- Reasoned about consistency: older clients and in-flight sessions still had to work after an API or data-model change.
- Operated services on AWS with Docker/Kubernetes/CI/CD; followed failures from test to runtime.
- Used Cursor to draft implementations, then hardened auth and error paths before merge.

SELECTED WORK (PERSONAL)

Auth + directory-of-users services — Node.js, JWT, events, Kubernetes

- Split auth from other services so identity had its own store; other services consumed users via APIs/events, not shared writes.
- Covered login and order-state paths with Jest; deployed with Docker/Kubernetes.

EDUCATION

B.Tech, Computer Science and Engineering (AI specialization)

ITM SLS Baroda University, Vadodara

2020 – 2024
