SUMMARY

Software Engineer with 2 years 2 months (BS + 2y2m, inside Cisco's BS + 1–3 band) shipping production features, tests, and production debugging. Python from personal ML/automation; strong Git, Linux/containers, and systematic log-based troubleshooting. Not claiming C/C++ or Wi-Fi controller experience — that is the learning edge. B.Tech CSE.

SKILLS

Minimum-qual overlap: Python, debugging from logs, test-and-fix loops, Linux/containers, Git

Production: Ruby on Rails, JavaScript/TypeScript, React/Next.js, REST APIs, Docker, Kubernetes, CI/CD

Not yet: C/C++ on access points/controllers, 802.11, Wireshark as a daily tool

EXPERIENCE

Software Engineer — SkyAch Software Solutions Pvt. Ltd.

Product engineering — features from implementation through validation

Jun 2024 – Aug 2026

- Owned scoped features end to end: implement, test, debug from logs, and validate fixes across UI and API — the same implement-through-validation loop in the Cisco posting.
- Reproduced production failures, isolated root cause, and shipped fixes without waiting for a dedicated QA handoff.
- Worked with Docker/Kubernetes and CI/CD so changes were repeatable, not one-off laptop builds.

PROJECTS

Services + tests (personal) and Python ML utilities

- Node.js/Express services with Jest tests and Kubernetes local deploy; Python scripts for churn scoring and demand modeling.

EDUCATION

B.Tech, Computer Science and Engineering (AI specialization)

ITM SLS Baroda University, Vadodara — BS in CS

2020 – 2024
